# 6. Statement on the Comparability of Information in the Financial Statements

The corresponding figures for the previous year are comparable with those of the current year.

# II. FINANCIAL YEAR AND ACCOUNTING CURRENCY

#### 1. Financial year

The company's financial year begins from 01 January to 31 December

#### 2. Accounting currency

The accounting currency is the Vietnamese Dong (VND) as the majority of transactions are conducted in VND.

# III. APPLICABLE ACCOUNTING STANDARDS AND POLICIES

# 1. Applied Accounting Policies

The Company applies the Vietnamese Accounting Standards and the Vietnamese Corporate Accounting System issued under Circular No. 200/2014/TT-BTC dated December 22, 2014, and related implementation guidance circulars of the Ministry of Finance for the preparation and presentation of financial statements.

2. Statement on Compliance with Accounting Standards and Policies

The Board of Management ensures compliance with the requirements of the Vietnamese Accounting Standards and the Vietnamese Corporate Accounting System issued under Circular No. 200/2014/TT-BTC dated December 22, 2014, as well as related implementation guidance circulars of the Ministry of Finance in the preparation and presentation of financial statements.

#### IV. ACCOUNTING POLICIES

1. Basis for Preparing the Financial Statements

The financial statements are prepared on an accrual basis (except for information related to cash flows).

2. Foreign Currency Transactions

Transactions denominated in foreign currencies are converted at the exchange rates prevailing on the transaction dates. Balances of monetary items in foreign currencies at the end of the financial year are translated at the exchange rates prevailing on that date.

Exchange rate differences arising during the year from foreign currency transactions are recognized in financial income or financial expenses. Exchange rate differences from the revaluation of monetary items in foreign currencies at the end of the financial year, after offsetting increases and decreases, are recognized in financial income or financial expenses.

The exchange rate used to convert foreign currency transactions is the actual exchange rate at the time the transaction occurs. The actual exchange rate for foreign currency transactions is determined as follows:

- For foreign exchange contracts (spot contracts, forward contracts, futures contracts, options contracts, and swap contracts): the exchange rate specified in the foreign exchange purchase and sale contract between the Company and the bank.
- For receivables: the foreign currency buying rate of the commercial bank designated by the Company for customer payments at the time the transaction occurs.
- For payables: the foreign currency selling rate of the commercial bank where the Company expects to transact at the time the transaction occurs.
- For asset purchases or expenses paid immediately in foreign currencies (not through payable accounts): the foreign currency buying rate of the commercial bank where the Company makes the payment.

The exchange rate used to revalue balances of monetary items denominated in foreign currencies at the end of the financial year is determined based on the following principles:

- For foreign currency deposits in banks: the foreign currency buying rate of the bank where the Company holds the foreign currency account.
- For monetary items denominated in foreign currencies classified as other assets: the foreign currency buying rate of the Bank for Investment and Development of Vietnam (BIDV) Phu My Branch (the bank with which the Company frequently transacts).
- For monetary items denominated in foreign currencies classified as payables: the foreign currency selling rate of the Bank for Investment and Development of Vietnam (BIDV) Phu My Branch (the bank with which the Company frequently transacts).

3. Cash and Cash Equivalents

Money includes cash and demand deposits. Cash equivalents are short-term investments with a maturity of no more than 03 months from the date of investment, are readily convertible to a known amount of cash, and are subject to an insignificant risk of changes in value

#### 4. Financial Investments

Held-to-Maturity Investments

An investment is classified as held-to-maturity when the Company has the intention and ability to hold it until maturity. Held-to-maturity investments include: term deposits at banks (including treasury bills and promissory notes), bonds, preferred shares with mandatory redemption by the

18/000/18

issuer at a specified future date, and loans held-to-maturity for the purpose of earning periodic interest, along with other held-to-maturity investments.

Held-to-maturity investments are initially recognized at cost, which includes the purchase price and related transaction costs. After initial recognition, these investments are recorded at their recoverable value. Interest income from held-to-maturity investments after the purchase date is recognized in the Statement of Income on an accrual basis. Interest accrued before the Company acquires the investment is deducted from the cost at the time of purchase.

When there is conclusive evidence that part or all of an investment may not be recoverable and the loss can be reliably determined, the loss is recognized in financial expenses for the year and directly deducted from the investment's value.

#### Investments in Associates

An associate is an entity over which the Company has significant influence but does not have control over its financial and operating policies. Significant influence is the power to participate in the financial and operating policy decisions of the investee but not to control those policies.

#### Initial Recognition

Investments in associates are initially recognized at cost, including the purchase price or capital contribution and any directly related investment costs. In cases where the investment is made using non-monetary assets, the cost of the investment is recognized at the fair value of the non-monetary assets at the time of the transaction.

Dividends and profits from periods prior to the acquisition of the investment are accounted for as a reduction in the value of the investment itself. Dividends and profits from periods after the acquisition are recognized as revenue. Dividends received in the form of shares are only tracked in terms of the increased number of shares, and the value of the received shares is not recognized.

NO

JPI API

# Provision for Impairment of Investments in Associates

Provision for impairment of investments in associates is established when the associate incurs a loss. The provision amount is determined as the difference between the actual contributed capital of the parties in the associate and the actual net assets of the associate, multiplied by the Company's ownership percentage relative to the total actual contributed capital of all parties in the associate. If the associate prepares consolidated financial statements, the basis for determining the provision for impairment is the consolidated financial statements.

Increases or decreases in the provision for impairment of investments in associates that need to be established as of the end of the financial year are recognized in financial expenses.

# Investments in Equity Instruments of Other Entities

Investments in equity instruments of other entities include equity instrument investments where the Company does not have control, joint control, or significant influence over the investee.

Investments in equity instruments of other entities are initially recognized at cost, including the purchase price or capital contribution and any directly related investment costs. Dividends and profits from periods prior to the acquisition of the investment are accounted for as a reduction in the value of the investment. Dividends and profits from periods after the acquisition are recognized as revenue. Dividends received in the form of shares are only tracked in terms of the increased number of shares, and the value of the received shares is not recognized.

Provision for impairment of investments in equity instruments of other entities is established as follows:

- For investments in listed shares or investments whose fair value can be reliably determined, the
  provision is based on the market value of the shares.
- For investments whose fair value cannot be determined at the reporting date, the provision is
  established based on the losses of the investee. The provision amount is calculated as the

TY AN UOC MY

difference between the actual contributed capital of all parties in the entity and the actual net assets, multiplied by the Company's ownership percentage relative to the total actual contributed capital of all parties in the entity.

Increases or decreases in the provision for impairment of investments in equity instruments of other entities that need to be established as of the end of the financial year are recognized in financial expenses.

5. Các khoản phải thu

Receivables are presented at their carrying amount, net of provisions for doubtful debts.

The classification of receivables into receivables from customers and other receivables is carried out based on the following principles:

 Receivables from customers represent trade receivables arising from purchase and sale transactions between the Company and independent buyers, including receivables from sales of goods exported under consignment to other entities.

Other receivables represent non-trade receivables that are not related to purchase and sale

transactions

Provisions for doubtful debts are established for each doubtful receivable based on the overdue age of the debts or the estimated potential loss, as follows:

• For overdue receivables:

- 30% of the value for receivables overdue for more than 6 months but less than 1 year.
- 50% of the value for receivables overdue for 1 year but less than 2 years.
- 70% of the value for receivables overdue for 2 years but less than 3 years.
- 100% of the value for receivables overdue for 3 years or more.
- For receivables not yet overdue but unlikely to be recovered: provisions are established based on the estimated potential loss.

Increases or decreases in the balance of provisions for doubtful debts that need to be established as of the end of the financial year are recognized in general and administration expenses.

#### 6. Inventories

Inventories are recognized at the lower of cost and net realizable value.

The cost of raw materials includes purchase costs and other directly related expenses incurred to bring the inventory to its current location and condition.

The cost of inventories is calculated using the weighted average method and accounted for under the perpetual inventory system.

Net realizable value is the estimated selling price of the inventory in the ordinary course of business, less the estimated costs of completion and the estimated costs necessary to make the sale.

A provision for devaluation of inventories is established for each inventory item where the cost exceeds its net realizable value. Increases or decreases in the balance of the provision for devaluation of inventories that need to be established as of the end of the financial year are recognized in the cost of goods sold.

7. Prepaid Expenses

Prepaid expenses include actual costs incurred that relate to the production and business activities of multiple accounting periods. The Company's prepaid expenses primarily consist of costs of tools and equipment used and repair expenses. These prepaid expenses are allocated over the prepaid period or the period during which the corresponding economic benefits are generated.

Tools and Equipment

Tools and equipment put into use are allocated to expenses using the straight-line method over a period not exceeding three years.

Repair Expenses

One-time repair expenses for assets with significant value are allocated to expenses using the straight-line method over three years.

8. Tangible Fixed Assets

Tangible fixed assets are presented at historical cost less accumulated depreciation. The historical cost of tangible fixed assets includes all costs incurred by the Company to acquire the assets up to the point they are ready for their intended use. Subsequent expenditures are added to the historical cost of tangible fixed assets only if they are certain to increase the future economic benefits derived from the use of the asset. Expenditures that do not meet the above conditions are recognized as production and business expenses in the year incurred.

When tangible fixed assets are sold or disposed of, their historical cost and accumulated depreciation are written off, and any gain or loss arising from the disposal is recognized in income or expenses for the year.

Tangible fixed assets are depreciated using the straight-line method over their estimated useful lives. The depreciation periods for various types of tangible fixed assets are as follows:

Type of Fixed Asset	Useful Life (Years)
Buildings and structures	06 - 25
Machinery and equipment	06 - 20
Transportation and transmission means	10 - 30
Management equipment and tools	03 - 10

### 9. Intangible Fixed Assets

Intangible fixed assets are presented at historical cost less accumulated amortization.

The historical cost of intangible fixed assets includes all costs incurred by the Company to acquire the assets up to the point they are ready for their intended use. Costs related to intangible fixed assets incurred after initial recognition are recognized as production and business expenses in the period unless such costs are associated with a specific intangible fixed asset and increase the economic benefits derived from the asset.

When intangible fixed assets are sold or disposed of, their historical cost and accumulated amortization are written off, and any gain or loss arising from the disposal is recognized in income or expenses for the year.

The Company's intangible fixed assets include:

Land use rights

Land use rights comprise all actual costs incurred by the Company directly related to the land in use, including payments for land use rights, compensation costs, site clearance, land leveling, and registration fees, v.v. Land use rights are amortized using the straight-line method over 15 years.

Computer software programs

Costs related to computer software programs that are not an integral part of the associated hardware are capitalized. The historical cost of computer software includes all expenses incurred by the Company up to the point the software is ready for use. Computer software is amortized using the straight-line method over 3 to 8 years.

10. Construction in Progress

Construction in progress reflects direct costs (including borrowing costs directly attributable in accordance with the Company's accounting policies) related to assets under construction, machinery and equipment being installed for production, leasing, and management purposes, as well as costs associated with ongoing repairs of fixed assets. These assets are recognized at historical cost and are not depreciated.

11. Payables and Accrued Expenses

Payables and accrued expenses are recognized for amounts owed in the future related to goods and services that have been received. Accrued expenses are recognized based on reasonable estimates of the amounts to be paid.

The classification of payables into trade payables, accrued expenses, and other payables is carried out based on the following principles:

Trade payables represent amounts owed arising from purchase transactions of goods, services, and assets, where the seller is an independent entity from the Company, including amounts payable for imports through a consignee.

Accrued expenses represent amounts owed for goods or services received from the seller or provided to the buyer but not yet paid due to the absence of invoices or incomplete accounting documentation. It also includes amounts payable to employees for wages, leave entitlements, and other production and business expenses that need to be accrued.

Other payables represent amounts owed that are non-commercial in nature and are not related

to purchase, sale, or provision of goods and services.

Payables and accrued expenses are classified as short-term and long-term on the balance sheet based on the remaining maturity as of the end of the financial year.

**Owners' Equity** 12.

Owners' Contributed Capital

Owners' contributed capital is recognized based on the actual capital contributed by the shareholders.

Share Premium

Share premium is recognized based on the difference between the issue price and the par value of shares issued in the initial or additional offering, the difference between the reissue price and the book value of treasury shares, and the equity component of convertible bonds upon maturity. Direct costs related to the additional issuance of shares and the reissuance of treasury shares are deducted from share premium.

**Profit Distribution** 

Net profit after corporate income tax is distributed to shareholders after setting aside the required funds in accordance with the Company's charter and applicable legal regulations, and is approved by the General Meeting of Shareholders.

The distribution of profit to shareholders takes into account non-cash items within retained earnings that may impact cash flow and the ability to pay dividends, such as gains from the revaluation of contributed assets, gains from the revaluation of monetary items, financial instruments, and other non-cash items.

Dividends are recognized as a payable when approved by the General Meeting of Shareholders.

Revenue and Income Recognition

Revenue from water supply

Revenue from water supply is recognized monthly based on the water consumption volume indicated on the water meter and the unit price approved by the People's Committee of Ba Ria -Vung Tau Province.

Revenue from service provision

Revenue from service provision is recognized when the following conditions are simultaneously met:

- Revenue can be reasonably determined. If the contract allows the buyer to return the service purchased under specific conditions, revenue is only recognized when such conditions no longer exist and the buyer no longer has the right to return the provided service.
- The Company has received or will receive economic benefits from the service transaction.

The portion of the work completed at the reporting date can be determined.

• The costs incurred for the transaction and the costs required to complete the service provision can be determined.

In cases where the service is performed over multiple periods, revenue is recognized in the period based on the progress of the work completed as of the end of the accounting period.

#### Interest

Interest is recognized on an accrual basis, based on the time and the effective interest rate for each period.

Dividends and Profit Distribution

Dividends and profit distribution are recognized when the Company has the right to receive dividends or profits from its investments. Dividends received in the form of shares are only tracked in terms of the increased number of shares, and the value of the received shares is not recognized.

### 15. Borrowing Costs

Borrowing costs include interest on loans and other costs directly related to borrowings.

Borrowing costs are recognized as expenses when incurred. If borrowing costs are directly related to the construction or production of assets under development that require a long period (more than 12 months) to be ready for use for their intended purpose or sale, these costs are capitalized into the value of the asset. For loans specifically used for the construction of fixed assets or investment properties, interest is capitalized even if the construction period is less than 12 months. Income arising from the temporary investment of loan funds is deducted from the cost of the related asset.

For general borrowings that are partially used for the purpose of investing in the construction or production of assets under development, the capitalized borrowing costs are determined based on the capitalization rate, which is applied to the weighted average accumulated costs incurred for the construction or production of that asset. The capitalization rate is calculated based on the weighted average interest rate of outstanding borrowings during the year, excluding specific loans used for the purpose of forming a particular asset.

PH

N

#### 16. Expenses

Expenses are amounts that reduce economic benefits and are recognized at the time the transaction occurs or when it is reasonably certain that they will be incurred in the future, regardless of whether cash has been paid or not.

Expenses and the related revenue they generate must be recognized simultaneously according to the matching principle. In cases where the matching principle conflicts with the prudence principle, expenses are recognized based on the nature and provisions of the accounting standards to ensure that the transaction is reflected fairly and accurately.

#### 17. Corporate Income Tax

Corporate income tax expenses include current income tax and deferred income tax.

#### Current income tax

Current income tax is the tax calculated based on taxable income. The taxable income differs from accounting profit due to adjustments for temporary differences between tax and accounting, non-deductible expenses, as well as adjustments for non-taxable income and carried-forward losses.

#### Deferred income tax

Deferred income tax is the income tax that will be payable or refundable due to temporary differences between the carrying amount of assets and liabilities for financial reporting purposes and their tax base. Deferred tax liabilities are recognized for all taxable temporary differences. Deferred tax assets are only recognized when it is certain that future taxable profits will be available to utilize these deductible temporary differences.

The carrying amount of deferred income tax assets is reviewed at the end of each financial year and is reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the deferred tax asset to be utilized. Deferred income tax assets that have not been previously recognized are reviewed at the end of the financial year and are recognized when it is certain that sufficient taxable profits will be available to utilize these unrecognized deferred tax assets.

Deferred income tax assets and deferred tax liabilities are determined based on the tax rates expected to apply in the year when the asset is realized or the liability is settled, using the tax rates enacted at the end of the financial year. Deferred income tax is recognized in the statement of profit or loss and is only directly recognized in equity when the tax is related to items recognized directly in equity.

Deferred income tax assets and deferred tax liabilities are offset when:

- The Company has the legal right to offset current income tax assets with the current income tax liabilities payable; and
- The deferred income tax assets and deferred tax liabilities relate to corporate income tax administered by the same tax authority:
  - For the same tax-paying entity; or
  - The Company intends to settle current income tax liabilities and current income tax assets on a net basis or recover assets simultaneously with the settlement of liabilities in each future period when significant amounts of deferred tax liabilities or deferred tax assets are paid or recovered.

#### 18. Related Parties

Parties are considered related if one party has the ability to control or significantly influence the other in making decisions regarding financial and operating policies. Parties are also considered related if they are under common control or share significant joint influence.

In considering the relationship of related parties, the substance of the relationship is given more importance than its legal form.

NN NN

#### 19. Segment Reporting

A business segment is a distinguishable component that engages in the production or provision of products or services and has risks and economic benefits that are different from those of other business segments.

A geographical segment is a distinguishable component that engages in the production or provision of products or services within a specific economic environment and has risks and economic benefits that are different from those of business segments in other economic environments.

Segment information is prepared and presented in accordance with the accounting policies applied for the preparation and presentation of the Company's financial statements.

Company pays value-added	d tax using the credit	method. The VAT r	rate is as follows:	5%	
Water supply activities				5%	

Water supply activities

Construction, installation, and supply of water industry materials and equipment

10%

- The Company pays corporate income tax on income from its production and business activities at a tax rate of 10% starting from when the project becomes operational. The Company is exempt from tax for the first 4 years after income from the project begins and is granted a 50% reduction in taxes payable for the next 7 years. 2015 was the last year the Company benefited from tax exemption and reduction. From 2016 to 2019, the Company received tax incentives based on its location, with a corporate income tax rate of 10%. From 2020, the Company benefits from a 10% corporate income tax rate for operations in the socialized sector.
- Income from other activities is subject to corporate income tax at a rate of 20%.
- The determination of the corporate income tax payable by the Company is based on current tax regulations. However, these regulations change over time, and tax rules for various types of transactions can be interpreted in different ways. The tax amount presented in the financial statements may change when the tax authorities conduct an audit.

#### Resource Tax

The Company must pay resource tax for the extraction of groundwater with the following tax rates:

Use of groundwater extracted for other purposes

8%

Use of groundwater for production purposes

5%

Previous year

#### Property Tax

The land rent is paid according to the notice from the tax authority.

#### **Environmental Protection Tax**

- The wastewater charge for domestic use is 10% of the current water price that the Company provides to users of piped water. All wastewater fees must be paid into the state budget after deducting the collection costs, which are 10% of the total wastewater fees, according to Decision No. 6759/QD-UB dated September 20, 2004, by the Chairman of the People's Committee of Ba Ria - Vung Tau
- The industrial wastewater charge is paid according to the notice from the Department of Natural Resources and Environment of

#### Other Taxes

The Company declares and pays taxes according to regulations.
